

# Aggressive Portfolio

## Investment Objective

The Aggressive Portfolio seeks long-term capital growth by investing approximately 90% of the portfolio's assets in domestic and international equity mutual funds and approximately 10% of assets in fixed-income securities. The portfolio is generally appropriate for investors seeking capital appreciation who are willing to accept volatility due to market fluctuations. The portfolio caters to aggressive investors with investment horizons greater than 10 years.

## Investment Policy

Assets are allocated among professionally managed mutual funds to provide efficient diversification. Each mutual fund is selected and monitored using a rigorous due diligence process that includes both qualitative and quantitative criteria. The portfolio is rebalanced regularly to compensate for changing market conditions.

## Asset Allocation

The pie chart below illustrates the portfolio's typical asset allocation. The typical allocation is an estimate and may not represent the current allocation of the portfolio due to active portfolio management and market fluctuations.

This information sheet has been issued by ABG Consultants, LLC (ABG). The purpose of this sheet is not to provide specific investment advice but to provide summary information regarding ABG's model portfolios. This model portfolio represents a discretionary investment service provided by ABG. The portfolio is constructed using modern portfolio theory, which relies in part on historical performance. Past performance is not indicative of future results, and there is risk that the portfolio may not achieve its objective. This sheet does not constitute an offer to buy or sell securities. Additional information is available upon request.
